Appendix A. Screener Survey: Procedures and Findings

A short "screener" survey was conducted to identify stakeholders involved in the WIRED Initiative and in other regional collaborations (not necessarily the Initiative) and to provide a rough approximation of the extent of awareness and engagement of collaborative workforce activities in each region. Surveys were sent to a comprehensive group of regional stakeholders including both those directly engaged and those not involved in the Initiative.

Screener Survey Methodology

Using publicly available hard copy and electronic databases, the evaluation team attempted to list *all* key stakeholders in each of the 26 regions in the following groups:

- K-12 school district superintendents
- College and university presidents
- Community college presidents and deans of workforce training
- Foundation executives
- Workforce investment board (WIB) chairs
- Workforce investment area agency directors
- Mayors
- County executives
- County/city economic development agency directors

Because the survey was designed to be conducted online, the evaluation team's goal was to obtain e-mail contact information for the potential respondents. The publicly available data sources provided such information for approximately half of the respondents. Telephone calls were made to try to obtain electronic contact information for the individuals for whom such information had not been found. This effort resulted in getting e-mail addresses for approximately 20 percent of the potential respondents, which increased availability of e-mail contact information to approximately 70 percent.

Near the end of May 2009, the list for the screener survey (and the initial list for the partner survey as described in Appendix B and in the report) were sent to the Regional Directors with a request to update the information as possible. All regions responded, and by the end of July 2009, e-mail addresses had been gathered for approximately 85 percent of the list. In late July, the evaluation team notified the regions that the screener survey was about to begin. On August 5, 2009, the evaluation team e-mailed the screener survey to the individuals for whom e-mail addresses were available, and mailed a hard copy of the survey to the individuals for whom that was the only contact information available. A total of 325 individuals were contacted by mail.

A total of 2,357 survey invitations were sent out. Telephone follow-ups were conducted starting in mid-September. Either from the initial distribution of the survey or through the telephone follow-ups, a total of 179 individuals were identified who were no longer in the scope of the survey or who could not be located because contact information was incomplete or erroneous and could not be corrected. Thus, the effective size of the respondent population is 2,178. Of these, 1,319 completed the (brief) survey, for a response rate of 60.6 percent. Table A-1 provides response rates by region.

Table A-1: Response to the Screener Survey

By Region

By Region

TOTAL	2,178	1,319	60.56%						

Nonresponses

A total of 859 individuals did not respond to the screener survey. Of these, 91 were outright refusals. A total of 83 were called at least 5 times, and did not respond to the survey. The full

¹ Calls were only logged if they resulted in a communication, either leaving a message with an individual or on voice mail.

partner survey was begun about five weeks after the screener survey, which overlapped with the follow-up attempts for the screener. It turned out that 240 of the non-respondents to the screener survey were listed by regions as partners, and were sent the partner survey. Screener survey follow-up attempts for these individuals were ended. Finally, follow-up telephone calls were in process for the remaining 445 individuals, when they were eventually stopped in order to fully staff the follow-up calls for the partner survey. The preponderance of these individuals had been telephoned at least two times by follow-up callers.

A copy of the screener survey is included in Appendix E. The first two questions asked respondents to self-identify the extent to which they are aware of and how actively their organization has been engaged in efforts in their community or region to transform economic, education, and workforce investment systems through increased collaboration. The response scale for these questions included "none," "little," "somewhat," and "a great deal." The evaluation team's hypothesis is that the answers to these two questions are correlated to the "market penetration" of regional collaboration efforts, including the Initiative. If the answer to the engagement question was "somewhat" or "a great deal," then the respondent was asked for contact information for a knowledgeable individual who could respond to the partner survey. Otherwise, respondents were asked to what extent regional efforts to bring about regional economic transformation had influenced their organization, if at all.

Screener Survey Findings

The analysis of the survey data explores the extent of awareness and engagement in regional collaborative efforts, as well as the influence of regional collaborative efforts on individual organizations. Key findings are presented below.

Awareness and Engagement

Almost 88 percent of the respondents indicated that they were either somewhat or a great deal aware of regional collaboration efforts (Question 1) and 80 percent indicated that they were engaged in collaborative activities at least some level of intensity, as shown in Figure 1. This level of awareness among key individuals in the regions can be viewed as an accomplishment, but given the response rate of only about 60 percent, this result may be biased toward aware and engaged individuals. Further, about one-third of these responses were "somewhat," a weaker acknowledgement of awareness or engagement. Finally, the wording of the questions referred to regional efforts to transform economic, education, and workforce investment systems through increased collaboration; the wording did not specifically mention the Initiative (The Initiative, however, was mentioned in the introduction to the survey, but not in the questions).

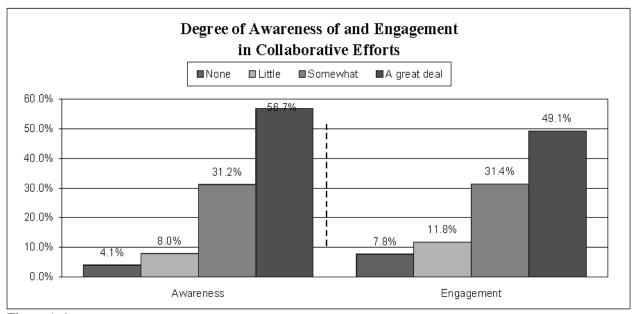

Figure A-1 *NOTE:* Bars represent the percentage distribution of all respondents to the screener survey regarding their awareness of (question 1) and their engagement in (question 2) transformative economic, education, and workforce investment collaborations.

As might be expected, the awareness and engagement of key stakeholders varied somewhat by region. Figures 2 and 3, below, display the percent of respondents in each of the 26 regions who indicated that they were somewhat or a great deal aware of regional transformation efforts, and Figures 4 and 5 display the percent of respondents who indicated that they were somewhat or a great deal engaged in collaboration efforts. Interestingly, there was a significant difference in the awareness between respondents from Generation II and III regions even though the time frame for the screener survey was later in the life cycle of the Generation II grants. The respondents in Generation III tended to have lower levels of awareness, as compared to respondents in Generation III. In four of the Generation II regions, less than 75 percent of the respondents were somewhat/a great deal aware of the regional initiative while in all of the Generation III regions at least 80 percent of the respondents were somewhat/a great deal aware of their region.

As shown in the figures, the variation between the generations held for engagement in the regions as well. Overall, about 78 percent of the respondents in Generation II indicated that they were engaged somewhat or a great deal in such collaboration; whereas 82 percent of the Generation III respondents gave one of those answers. Less than 76 percent of respondents in six of the Generation II regions indicated that they were engaged in a collaborative effort somewhat or a great deal, while in Generation III regions, this was true in only three of the regions.

The conclusion from this screener survey data is that collaboration, for the most part, had developed within the regions. A large preponderance of survey respondents were aware of and engaged in efforts to collaborate for regional transformation. Moreover, while the differences were relatively minor, more respondents in the Generation III regions (than the Generation II regions) were aware of efforts to increase collaboration among key organizations within their regions.

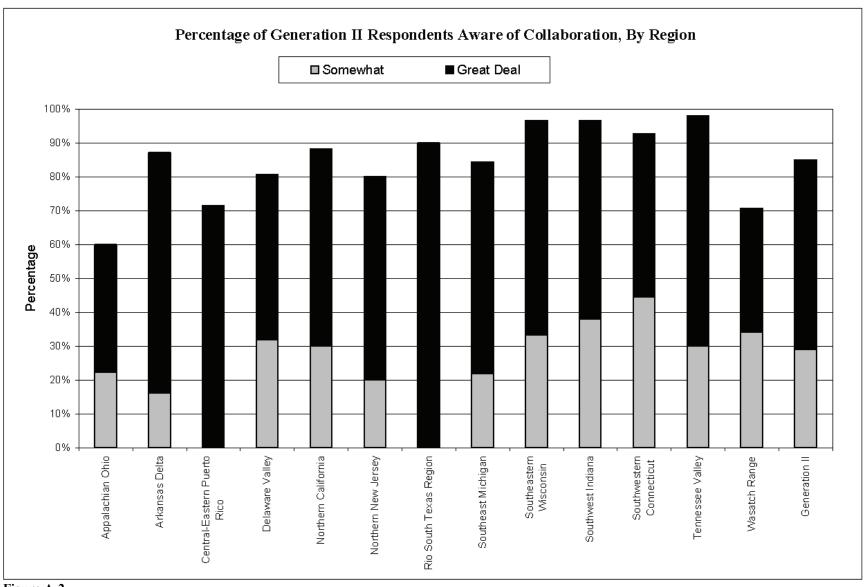

Figure A-2

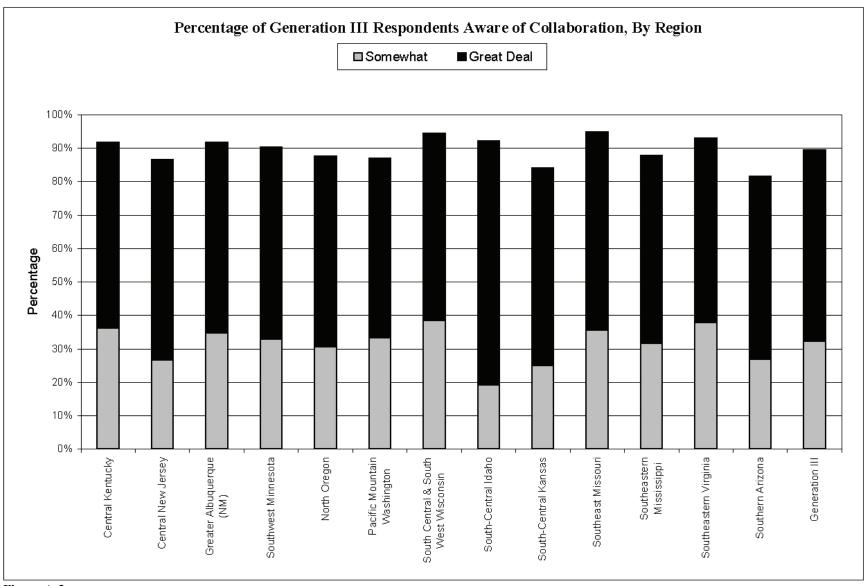

Figure A-3

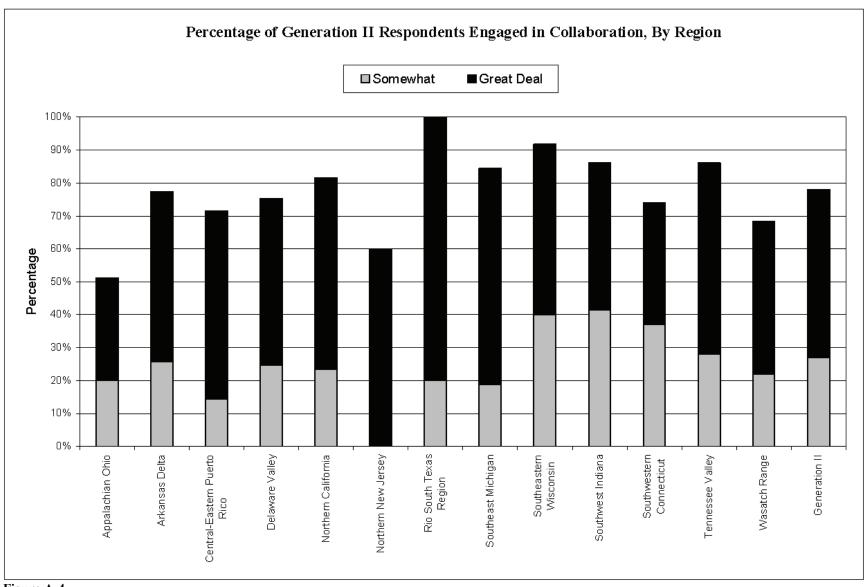

Figure A-4

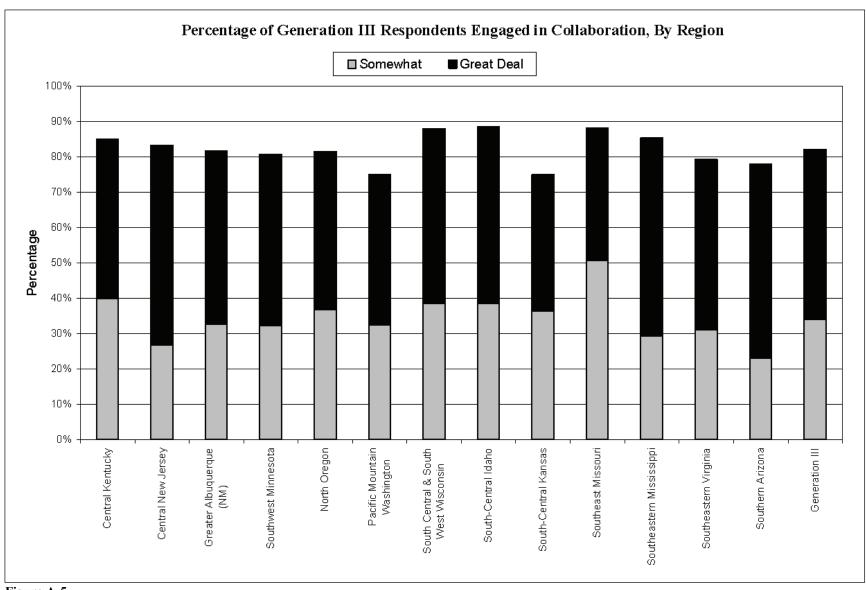

Figure A-5

Influence on Non-Collaborative Partners

A second purpose of the screener survey was to try to determine whether regional collaborations had influences on other organizations or entities in the regions that might not be engaged directly in them. For example, a regional collaboration might develop curriculum materials for a postsecondary course, and those materials might be used by other institutions in the region, even though no representatives of the institutions may be engaged in the collaboration. These influences might be positive, or they might be negative. An example of a negative effect might be the perception that an organization receives fewer resources because resources are being directed into the regional collaboration.

In general, the screener survey found evidence of these broader effects on entities outside of regional collaborations. As noted previously, the question was asked only of respondents who indicated that they had little or no engagement in a regional collaboration. Because such a large share of the respondents indicated that their organization was somewhat or a great deal engaged, the number of individuals who were asked this question was modest. Figure 6 shows that almost 60 percent of the respondents who indicated that they had little or no engagement in the regional collaboration reported that they were affected by the efforts of collaborations (a little, somewhat, or a great deal). This is approximately 160 respondents (or about 12 percent of the total respondents). A slightly larger percentage of these indicated that the influence on their organization was little as opposed to somewhat or a great deal.

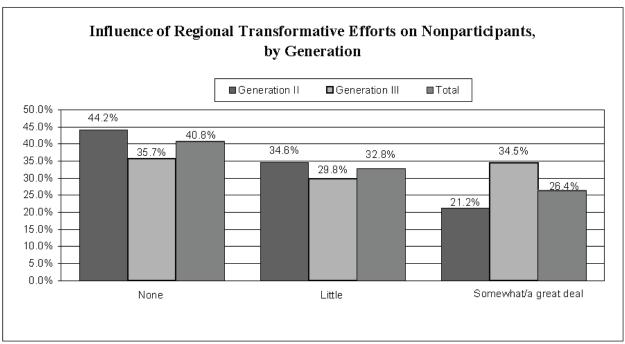

Figure A-6 *NOTE:* Nonparticipants are respondents to the screener survey who indicated that they are not actively engaged in transformative efforts. Bars represent percentage distribution of respondents from regions in each generation and total who are not actively engaged in transformative efforts (question 2a).

The individuals who were affiliated with a Generation II region were less likely to indicate having been influenced by the regional collaboration, and were less likely to report that effect as

"somewhat or a great deal," as compared to individuals who were affiliated with a Generation III region. The percentage of respondents who indicated that they had been influenced by the region (i.e., any response other than "none") was about 55 percent for Generation II compared to almost 65 percent for Generation III. Furthermore, a much larger share of the Generation III respondents reported that the broader effect was somewhat or a great deal (about 35 percent) as compared to the Generation II respondents (just over 20 percent).

To get a sense of whether these broader influences were positive or negative, we asked respondents an open-ended question to explain. About 60 individuals responded. Many comments were difficult to interpret, but the evaluation team's impression is that about three-quarters of the comments seem to indicate a positive effect, and one-quarter are negative. These fractions should be considered to have substantial error bands. They rely on the evaluation team's interpretations of comments that emanate from a small number of respondents.

Some of the positive comments appeared to come from economic developers; for example:

- "Workforce quality and availability are major concerns to companies looking for new sites. We have to make a considerable effort with each prospect to convince them that our area can produce the workforce they need."
- ". . .helps us find and keep talent."
- "Has made the County think about job creation and being more strategic."

In some cases, the positive comments appeared to come from educators; for example:

- "More jobs may bring more families with school age children."
- "It positively influences the quality of public services to our students and employees."

Most of the negative comments seem to emanate from having bad experiences with regional collaborative efforts; for example:

- "Once heavily invested in project, but activities seem to benefit a few. Conflicts of interest, and communication is very exclusive and poor."
- "Our organization only looks at how much money is there in it for them. They have discontinued programs that are directly tied to regional economic transformation."
- "We are affected negatively because we are a rural county and they focus on metropolitan areas; unless they need cheap land."

Summary of Findings

The responses to the screener survey indicate a widespread awareness of regional collaboration efforts among key stakeholders. Almost 90 percent of respondents indicated that they were aware of such efforts either somewhat (about 30 percent) or a great deal (55 to 58 percent). The respondents to the survey from the Generation III regions had slightly higher levels of awareness than did the respondents from the Generation II regions.

Page A-13 Partners, Networks, and the Economic Context for Generation II and III WIRED Regions

About 80 percent of the respondents indicated that their organization was engaged in the collaborative efforts somewhat (about 27 percent in Generation II regions and 34 percent in Generation III regions) or a great deal (about 50 percent in both generations).

Finally, the screener survey seems to indicate that regional collaborations aimed at transforming local economies tended to have broader effects in the region, and, for the most part, those impacts were positive. Measuring only the direct benefits of these collaborations on the organizations that are engaged in them would underestimate the overall benefits of the regions.

Appendix B. Partner Survey: Procedures and Findings

The intent of the partner survey was to contact the entire set of individuals who were partners in the regional collaboration.

Partner Survey Methodology

The lists of respondents were constructed as follows. The evaluation team constructed a list of partners for each region from their initial site visit, from the regions' implementation plans, and from the social networking data that were captured during the initial site visit. In late May 2009, these lists were sent to the regions (i.e., regional directors) with a request to edit contact information, as necessary, and to add contact information for any individual who was a partner, but was not included in the initial list. All of the regions responded to this request.

In addition to the list of individuals that came from the site visit or regional documentation, the evaluation team added individuals who indicated on the screener survey that they were engaged in a regional transformation collaboration. The evaluation team identified this list as the self-identified partners. Across all of the regions, this list was about 10 percent of the final list (194 out of 1, 912 individuals).

The survey was complex, but was completely fielded online. In late August 2009, the regional directors were sent an e-mail indicating that the screener survey was in process and that the partner survey would begin around the middle of September. On September 14, 2009, the evaluation team sent out a mass e-mail to the individuals who had been identified as partners by the regions or were self-identified partners from the screener survey requesting their participation in the partner online survey. Because of a lack of e-mail information, letters were sent to 35 individuals asking them to access the survey online. Each potential respondent was assigned a specific ID number so that specific responses could be tracked.

Around October 1st, the evaluation team sent an e-mail to the regional directors asking them to send out a message to the individuals who had not yet responded. The e-mail contained a draft message for the regions to use. The number of regions who contacted the nonrespondents is unknown, but it appeared as though most regions did because responses spiked shortly thereafter.

In October, the Upjohn Institute and PPA staff conducted telephone follow-ups calls for the survey. Staff attempted to convert non-respondents to participate, and offered the option of completing the survey on the telephone or online. Where requested, staff resent the online link to the potential participant. An online database was created for this project and tracked the contacts and outcomes of the conversion efforts. A five-call rule was imposed, if five calls were logged (again a call was considered complete only if communication occurred) then the respondent was assumed to be a refusal.

The evaluation team imposed an ending date of October 31, 2009 and sent a final e-mail to the regional directors indicating that the survey was about to close, and that their help in reaching

¹ A Spanish version of the survey was made available online, and respondents in the Puerto Rican region were allowed to choose English or Spanish.

nonrespondents would be appreciated. Again, draft text was provided to the regions. Most of the regions complied. By the first week of November, a total of 1,458 responses had been received. The total number of individuals who had been listed or self-listed partners was 2,204. As the follow-up activities were conducted, and especially as regions were contacted, the evaluation team learned of individuals who were no longer partners because they had moved out of the area or lost their job, or for some other reason (death, incapacity, etc.). Individuals were deleted from the follow-up sample except in those cases where the individual had self-identified themselves as participants in the regional collaboration. A total of 292 individuals were deleted from the lists, which left an effective sample size of 1,912.

Table B-1 provides the response rate by region, by generation, and for all regions. Overall, the response rate was 76.3 percent (1,458 usable responses out of 1,912 individuals). There were no notable trends or differences in response rates by generation or region. Within regions, there were three regions with relatively low response rates (56 percent to 68 percent); there were three regions with outstanding response rates (between 93 percent and 100 percent); and for the majority of regions, the response rates ranged between 70 percent and 92 percent.

Nonresponses

A total of 454 individuals did not respond to the partner survey. Of these, 137 were outright refusals. A total of 209 were called at least five times, and did not respond to the survey. Finally, telephone follow-ups were in process for the remaining 108 individuals, when they were eventually stopped at the end of the survey. The preponderance of these individuals had been telephoned at least three times by follow-up callers.

Regional Analyses of Data from Partner Survey

The remainder of this appendix provides graphical representation of the data from the partner survey, by region. These data were referred to previously, in the section of the report describing the partner survey findings.

Appendix D. Detailed Extant Data

This appendix is organized into the following distinct sub-sections:

- The appendix begins with a description of how comparison regions were selected for analyses. Tables D1-through D-3 present matched comparison group variables.
- Figures D-1 through D-26 display quarterly employment trends for each region and its comparison region for both total and manufacturing employment. To illustrate trends and allow for cross-regional examination, total and manufacturing sector employment levels have been indexed to a value of 100 in the first quarter of 2007. Changes in the index in subsequent quarters can therefore be interpreted in relative percentage terms to the original starting value.
- Tables D-4 through D-29 contain detailed demographic and workforce data for each region.
- Figures D-27 through D-76 are graphs of job creation and net job flows for 25 of the 26 regions and their comparison regions. These data come from the U.S. Census QWI data system (http://lehd.did.census.gov/led/datatools/qwiapp.html), which does not include data for Puerto Rico. Job flows serve as a measure of the robustness of the regional economy and the relative demand for new workers. Job creation measures the number of new jobs created at firms that were expanding during the quarter, which is an important consideration for workforce development, since the presence of companies that are adding jobs may create a demand for newly trained workers even in places or times of seemingly modest net employment change. Net job flows simply measure the total change in total employment across all firms during the period and reflects the overall employment strength of the regional economy.
- Tables D-30 and D-31 contain estimated 2006 employment levels for industries indentified as a focus in each region's respective implementation plan.

Comparison Group Methodology for Analyzing Outcomes¹

The team has used basic economic and demographic extant data to construct county-based regional comparison groups for each of the 13 Generation II and 13 Generation III WIRED regions. It is important to identify such groups because the attribution of outcomes (long-term or intermediate) to the Initiative is considerably strengthened by comparing regions that received the "treatment" (that is, received an Initiative grant) to similar regions that did not. Of course, the effectiveness of this approach depends upon the ability to match groups on observable characteristics in order to break down correlations between unobservable characteristics and treatments. The criteria used in constructing the comparison regions for the Generation II and

¹ The following is an excerpt from the Evaluation Design Report, pages 23 to 32, that describes how comparison groups were selected for this analysis.

Generation III regions were designed to control for the effects of the following five factors of regional growth:

- 1. *Industrial Mix:* Regions that house large manufacturing or agricultural sectors will likely experience slower employment growth than more service-based regions. This does not necessarily reflect on their competitiveness. Instead, it is because 1) the demand for services is growing faster than the demand for manufactured goods made in the United States and 2) the nation's manufacturers and agricultural producers are expected to continue to make substantial gains in labor productivity.
- 2. *Entrepreneurship:* Regions that have a strong entrepreneurial environment are hypothesized to have higher rates of economic growth than other regions.² This is true for rural areas as well as urbanized regions.³ In addition, innovation is often associated with entrepreneurship.⁴
- 3. *Urban vs. Rural:* Numerous recent studies have shown that large metro areas perform better than small metro areas and rural regions.⁵ The reasons for this disparity in growth include the importance of economic clusters, attractive urban amenities, greater networking opportunities, and thick labor markets.
- 4. *Human Capital:* Most economic development growth studies have confirmed that a region's ability to attract and retain an educated workforce is the primary factor that will influence its future growth. Education is also tied to personal income growth.
- 5. *Preexisting Trends:* Regions that have experienced population and employment growth in the past five years are likely to continue to enjoy above-average growth in the next five years.

Table D-1 lists ten economic variables that were considered in the selection of comparison regions for each of the 26 Generation II and Generation III WIRED regions. The ten variables comprise two in each of the growth factor categories. The first variable listed in each category is the more important of the two, i.e., the variable that was more closely matched in selecting the comparison groups.

Table D-1: Economic Variables Considered in Identifying Matched Comparison Groups, by Growth Factor

Growth Factor	Variable
	Percentage of workforce in manufacturing
Industrial Mix	Percentage of workforce in agriculture
	Percentage of workforce who are proprietors
Entrepreneurship	Number of proprietorships
	Population in the region's most populous county
Urban vs. Rural	Population density
	Percentage of persons 25 years or older with a Bachelor's Degree
Human Capital	Per capita income
	Percentage change in employment 2001 to 2005
Pre-Existing Trends	Percentage change in population 2000 to 2006

Additionally, the team took into consideration specific characteristics found in some of the Initiative regions. These include:

- Housing a major government/military facility
- Surrounding but not including the core county/city of a metropolitan area
- The presence of a major university
- Generally recognized physical amenities (mountains, bodies of water, and so forth)

Where feasible, the team has selected comparison regions that are in the same state or in a neighboring state. In one instance, two regions (Wasatch Range and Greater Albuquerque [NM]) share the same comparison region, since the characteristics of the two regions are similar enough to allow for this. Two other regions (Arkansas Delta and Southeastern Mississippi) share similar comparison regions. Finally, the team has excluded any county that is in another Initiative region, since it would be receiving the benefit of other program activities. Although all Generation III regions are administratively led by a WIB, only five of them are composed of regions that are exactly coincident with workforce investment area boundaries. For these five regions, the comparison areas were designed to also follow the boundaries of workforce investment areas.

In short, the PPA/Upjohn Team's process for choosing comparison groups was based on an economic growth framework grounded in economic development research. It was guided by the five regional growth factors that have been shown empirically to be statistically associated with regional economic performance. They are industrial mix (manufacturing vis-à-vis agriculture), entrepreneurship, urban vs. rural environment, human capital, and pre-existing trends. The process involved judgment as well. Finally, in the process, the team imposed contiguity, i.e., the comparison groups must be composed of contiguous counties and, of course, the team eliminated counties that were in another Initiative region.

Every effort was made to keep the comparison region within the same state as the Initiative region; however, if that was not possible neighboring states were considered. The first step in the process was to select a set of counties within the same state(s) as each Generation II or

Generation III region that was approximately the same geographic size and was located close to the region. The team compared the variables listed in Table D-3, below, for the Initiative region to the selected counties as a region. Counties were then substituted in the proposed comparison region to see if the team could improve the match. If one or more candidates for the comparison region were "close," then the team relied on matching the characteristics noted above to break ties (i.e., major government/military facility, metro area, major university, physical amenities). Also as noted, the team maintained WIB area boundaries to the extent possible for some of the Generation III matches.

In instances where this process did not initially provide a "good" (in the team's judgment) comparison group within the same states, the second level of analysis was to select a set of counties in an adjacent state. The same process discussed above was then repeated. In a few idiosyncratic cases where there was a lack of "good" (as well, in the team's judgment) matches within state or in adjacent states, the team went to a third source of comparison group counties, which was non-adjacent states.

All together, the team has seven instances in which the comparison group is within state; thirteen instances where the comparison group is in adjacent states; and six instances where the comparison group is in a state that is not adjacent.

The PPA/Upjohn Team's selections for the comparison groups are listed in Table D-2.

In the case of the Initiative regions, no comparison group can possibly match the region on every criterion of importance to the environment for workforce development. However, by using the variables previously described in this section, the team has managed to assemble comparison groups that substantially match their corresponding WIRED regions on the majority of key factors of regional growth. Table D-3 exhibits the differences (WIRED region minus comparison region) for the primary variable for each of the growth factors noted in Table D-1.

Most comparison groups differ to a larger extent than hoped on at least one key factor of growth; however, the number of key factors that are very closely matched with the comparison region is at least as high or higher in every instance. In short, overall, the comparison groups share far more instances of similarity on key factors than differences.

Table D-3: Differences Between the WIRED Regions and Comparison Groups in Key Variables Considered to Develop Comparison Groups

NOTE: Each region is taking a different approach to workforce transformation: some are working on transforming current industries while others are striving to prepare workers for what industries might come next. Additionally, many regions are not industry-focused, but are instead working on advancing a technology or occupational skill-set that transcends industries. This and the following table provide employment estimates based on an interpretation of the industries mentioned in each region's implementation plan. The values are estimates of the size of the existing workforce base each region had to work with as activities commenced.

Appendix E. Screener Survey

This survey is designed to collect information about efforts to increase collaboration in your community between research, education, economic development and workforce development systems. The U.S. Department of Labor has provided funding to support such collaboration, through the Workforce Innovation in Regional Economic Development (WIRED) Initiative, in order to increase your community's economic competitiveness in the global marketplace. This survey is intended to assess the degree and type of collaboration between partners and other stakeholders that is taking place in your region.

Conf	idant	iolity	Statement
Cont	ıaenı	iantv	Statement

Your responses will help us better understand these collaborative efforts. Individual responses will not be attributed to specific individuals or organizations. Responses to this data collection will be used only for statistical purposes. The reports prepared from this survey will summarize findings across the sample and individual forms will not be available to anyone outside the study team, except as required by law.

Public Burden Statement

According to the Paperwork Reduction Act of 1995, persons are not required to respond to this collection of information unless it displays a currently valid OMB control number and expiration date. Responding to this questionnaire is voluntary. Public reporting burden for this collection of information is estimated to average 5 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate to the Office of Policy Development and Evaluation, U.S. Department of Labor, Office of Policy Development and Research, Room N5641, 200 Constitution Avenue, NW, Washington, D.C. 20210.

Do NOT send the completed questionnaire to this address.

Instructions. One of the purposes of the survey, which is being sent to individuals who hold positions similar to yours in the region, is to gauge your familiarity with efforts to transform your community's economic, education, philanthropic, and workforce investment systems. The survey should take you approximately five (5) minutes to complete. Thank you in advance for your time.

Should you have any questions or comments about this survey, please contact:

Dr. Kevin Hollenbeck <u>Hollenbeck@upjohn.org</u> 269.343.5541

Organization Type. We have sent you this survey because our information indicates that you are a decision maker in the following type of organization: _______. If our information is incorrect, please cross off the wrong organization type and mark the correct one.

K12 Education
Community/Technical College
University/College
Workforce Development
Local Government
State Government
Economic Development
Foundations
Angel/Venture Capital Provider

	ness n Representative r Please describe
Surv	ey. Use the following scale to answer the questions below:
	0 1 2 3 None Little Somewhat A Great Deal
1.	How aware are you of efforts in your community or region to transform economic, education, and workforce investment systems through increased collaboration?
2.	How active has your organization been engaged in the transformative efforts referred to in question 1?
	IF ANSWER IS 0 OR 1, GO TO 2a. IF ANSWER IS 2 OR 3, GO TO 2b.
	2a. Even though your organization may not be actively involved, these efforts may be affecting your organization or how you do business. To what extent are regional efforts to bring about regional economic transformation influencing your organization, if at all? (Use scale above.)
	If answer is 1, 2, or 3, please explain and then skip to Question 2b? If answer is 0, GO TO 3.
	2b. Who in your organization (including yourself) would be appropriate to provide information about your organization's involvement in regional transformation? (We will send this individual a follow-up survey.)

3. Do you have any comments about efforts to achieve economic transformation in your region that might be of value in the evaluation?

THANK YOU.

Appendix F. Partner Survey

This survey is designed to collect information about efforts to increase collaboration in your community between research, education, economic development and workforce development systems. The U.S. Department of Labor has provided funding to support such collaboration, through the Workforce Innovation in Regional Economic Development (WIRED) Initiative, in order to increase your community's economic competitiveness in the global marketplace. This survey is intended to assess the degree and type of collaboration between partners and other stakeholders that is taking place in your region. We have sent you this survey because your organization has been identified as a collaborator or potential participant in this regional economic transformation effort. If you are not participating in collaborative efforts to transform your region's economy, or WIRED in particular, please answer the first five questions. Please note that the WIRED initiative in your region may be called "or".

Confidentiality	Statement

Your responses will help us better understand these collaborative efforts. Individual responses will not be attributed to specific individuals or organizations. Responses to this data collection will be used only for statistical purposes. The reports prepared from this survey will summarize findings across the sample and individual forms will not be available to anyone outside the study team, except as required by law.

Public Burden Statement

According to the Paperwork Reduction Act of 1995, persons are not required to respond to this collection of information unless it displays a currently valid OMB control number and expiration date. Responding to this questionnaire is voluntary. Public reporting burden for this collection of information is estimated to average 30 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate to the Office of Policy Development and Evaluation, U.S. Department of Labor, Office of Policy Development and Research, Room N5641, 200 Constitution Avenue, NW, Washington, D.C. 20210.

	Other:
-	
	nich of the following best describes your role in the governance of regional transformation efforts,
	cluding the WIRED initiative? [CHECK ONLY ONE]
	Part of formal leadership structure
	Provide leadership for a subregion, specific activity, community, or project as part of efforts to transform our region, including through the WIRED initiative
	Provide leadership for a subregion, specific activity, community, or project that is not part of the WIRED initiative, so far as I know
	Other involvement in governance or leadership [please describe]:
	No significant role in the governance of the WIRED initiative. Participant in only a small part of such an initiative and am not familiar with all of the activities in the region
	nich of the following best describes the extent of awareness throughout your organization of the forts to transform your region? [CHECK ONLY ONE]
	A few key senior leadership staff participate in efforts to transform our region, but most of the organization is unfamiliar with WIRED

A few mid-level managers and/or line staff partici is unfamiliar with WIRED	pate in the ir	nitiative, but	most of the	organization
☐ Staff members of my organization are generally aware of efforts to transform our region, including through the WIRED initiative				
☐ Familiarity with efforts to transform our region is	widespread t	throughout tl	he organizat	ion
☐ I do not know the extent of awareness of WIRED	throughout r	ny organizat	ion	
8. Thinking back to 2006, to what extent would you				
say you agree or disagree with the following statements about your region: [CHECK ONLY ONE]	Strongly Disagree	Disagree	Agree	Strongly Agree
say you agree or disagree with the following statements about your region:		Disagree	Agree	
say you agree or disagree with the following statements about your region: [CHECK ONLY ONE] a) Agencies in our community had a history of working		Disagree	Agree	

Collaboration:

For the following question, we use the term "collaborative" to refer to the formal or informal network of organizations and individuals working together on activities aimed at transforming the regional economy and the economic and workforce development systems, including the WIRED initiative.

9. At the present, to what extent would you say you agree or disagree with the following statements about efforts to transform your region's economic competitiveness: [CHECK ONLY ONE]	Strongly Disagree	Disagree	Agree	Strongly Agree
a) My organization is benefiting from being involved in regional transformation efforts.				
b) Most people involved in efforts to achieve regional transformation are willing to compromise on important aspects of our joint efforts.				
c) Most people in this collaborative group have a clear sense of their roles and responsibilities.				
d) Most people in this collaborative group communicate openly with one another.				
e) The collaborative group is open to "out-of-the-box" thinking where diverse and unique ideas are highly valued.				
f) Most members of the collaborative group have a high degree of tolerance for risk-taking and change.				
g) The partners in this collaboration have a clear process for making group decisions.				
h) This collaborative group is able to adapt to changing conditions, such as changes in political climate, business climate, or leadership.				

Page F-7 Partners, Networks, and the Economic Context for Generation II and III WIRED Regions

9. At the present, to what extent would you say you agree or disagree with the following statements about efforts to transform your region's economic competitiveness: [CHECK ONLY ONE]	Strongly Disagree	Disagree	Agree	Strongly Agree
 i) Our collaborative group has adequate "people power" to do what it wants to accomplish. 				
 j) The level of commitment among the collaborative participants is consistently high. 				
k) Resources (time, money, materials, staff, space, etc.) are shared among groups/organizations.				
I) The collaborative group includes a diverse range of stakeholders involved in many different aspects of regional transformation.				
m) All the most important stakeholders are involved in the collaborative process.				
 n) My involvement (and/or that of my organization) in this collaborative effort is increasing over time. 				
o) My organization has committed substantial resources to this collaborative effort.				
p) Significant cross-industry networks are developing in this region.				
 q) Valuable cross-professional networks are developing in this region. 				
r) Collaboration has resulted in leveraging new sources of funds beyond those used in the past for these kinds of efforts.				
s) I feel optimistic about our ability to improve the job skills of our regional workforce.				
t) I feel optimistic about the future of our regional economy.				
10. The following are different levels or stages of collaboration. collaborative efforts in which your organization participates competitiveness? [CHECK ONLY ONE]				

1. Co-Existence: Entities are aware of each other, but have no prior history of interaction and know little about each other's composition or way of conducting business.
2. Communication: Entities know of each other, have some history of interaction and know the basics of each other's composition or way of conducting business. Communication is informal, without commonly defined mission, form, or planning.
3. Coordination: Entities have committed to sharing resources in order to accomplish shared goals and have implemented activities that depend upon these shared resources. Few changes have been made in how core businesses operate, however, and limited sharing of information or decision-making occurs outside the area of coordination.
4. Cooperation: Entities have established policies and practices that involve ongoing exchange of information integrated into routine practice/business. They negotiate mutual roles and share resource to achieve joint goals. Collaborating organizations have shared interests, joint decision-making, and

□ **5. Collaboration:** Entities have engaged in shared planning and decision making that is taken seriously in the business decisions of each entity – such that each entity is willing to change its practices to achieve a shared goal. Authority is vested in the collaborative – rather than in individuals or an individual agency.

integrated efforts.

	In which of the following collaborative functions do you or others in your organization participate in the context of efforts to increase your region's economic viability? [CHECK ALL THAT APPLY]
	Strategic Planning: Collaboratively assessing community needs and current policies and programs, establishing common goals, sharing data on skills or industry shortages or gaps and regional resources, identifying initiatives and future actions, or developing a common strategic plan that captures areas of mutual interest.
	Resource Acquisition: Coordinating or even combining resource acquisition efforts.
	Resource Allocation: Jointly allocating resources to address common goals.
	Policy and Program Direction: Developing a common framework of policy and program direction.
	Staff Training: Collaboratively training staff in new policies or program directions associated with regional transformation.
	Program Operations: Modifying program operations to adapt to new policies or program directions associated with regional transformation.
	Information Dissemination: Disseminating information specifically about regional transformation efforts, or about different activities associated with aligning resources and systems, using a common message, jointly sponsoring dissemination activity, or otherwise collaborating on dissemination efforts.
	Community Representation: Collaboratively soliciting input from the community or otherwise representing the initiative with a common message or with a shared identity as a region, as WIRED or(regional brand) or as related activity.
	Community Leadership: Collaborating on efforts to exercise community leadership, reaching out into the community to build support for agency efforts and raise awareness of available services.
	Program Evaluation: Collaborating on evaluation efforts, including sharing evaluation results, reviewing evaluation procedures, developing shared evaluation guidelines, and/or conducting formal joint evaluations.
So	cial Networking:

12. An important part of the evaluation's efforts is observing and documenting the formation or continuation of communication links among partners and collaborators in the WIRED regions. For five individuals with whom you have significant contact in the context of efforts to transform your region: Please give us names, organizational affiliations, zip code, type of organization, organizational role, and frequency of contact (per week, month, or year). [SEE NEXT PAGE]
